

Stormwater Approval

Pennsylvania Act 167 mandated that municipalities throughout the State of Pennsylvania to enact local Stormwater Management Ordinances which require the submission of a Stormwater Management Plan (SMP) any project that will create more than 1,000 sq.ft. of new impervious area or disturb more than 5,000 sq.ft. of earth. In order to provide a more timely and cost effective review of SMPs, some townships have opted to have the county's engineer review stormwater plans related to subdivision or land development applications. Please contact our office to determine if a SMP is required for your project and if the plan will be reviewed by the county review engineer. Please be aware that any review fees incurred as part of the SMP review will be billed to the applicant.
